

Abdulelah Alluqmani

Computer Science Graduate

Medina, Saudi Arabia | Abdulelah.alluqmani@gmail.com | +966553602170 | abdulelah.it.com | [LinkedIn](#)

PROFESSIONAL SUMMARY

Computer Science graduate from Yanbu Industrial College with hands-on experience in full-stack web development (Laravel, PHP, JavaScript, FARM stack) and AI-based solutions (Python, NLP). Currently completing a mandatory IT co-op at Saudi Energy Company (expected completion: January 2027), applying early for software developer roles ahead of availability.

EXPERIENCE

IT Co-op / Helpdesk Intern — Saudi Energy Company

June 2026 – Present

- Provide IT helpdesk support, resolving hardware, software, network, and access-related issues for employees
- Deployed the company's standard Windows image on new workstations, joined them to Active Directory, and applied security policies and DLP compliance checks before production
- Completed BIOS/firmware updates and the new company-logo boot splash on 500+ PCs, using a checklist and a pilot batch to catch failures before full rollout
- Securely erased retired hard drives with Blancco data-erasure software so the data cannot be recovered
- Gained exposure to core enterprise systems (ERP, mainframe) that support operations, finance, and asset management
- Identified recurring support gaps that led to the AI-based ticketing system I built as my capstone project

EDUCATION

Bachelor of Computer Science — Yanbu Industrial College | Graduated: June 2026

PROJECTS

AI Helpdesk Ticket System (RAG-Based) — FastAPI, React, MySQL (FARM Stack), LLM APIs (Groq)

- Built an AI-first IT ticketing system powered by a pluggable LLM backend (Groq API) with Retrieval-Augmented Generation (RAG) over internal docs, giving dynamic AI-generated answers rather than fixed FAQ responses, plus a one-click 'talk to a human' escalation option
- Implemented confidence-based auto-escalation, automatic ticket category tagging (network/hardware/access/software), and post-resolution satisfaction ratings
- Developed a filtered 'needs help' queue, live-chat spectating for staff before escalation, and hidden per-ticket AI summaries for faster handoffs

Freelancer Web Platform — Laravel, PHP, Bootstrap, CSS

- Developed a full-stack freelance marketplace where clients post jobs and freelancers submit bids
- Implemented an automated email notification system based on freelancer skill matching
- Built the backend logic and database structure entirely using Laravel

AI Hotel Search System (NLP-Based) — Python, Flask, NLP

- Built an intelligent hotel search system using Natural Language Processing to parse queries like "hotels in Medina under 500 SAR"
- Implemented filtering based on price, rating, and location

Library Management System — HTML, CSS, JavaScript, PHP

- Developed a system for students to borrow books and for admins to manage inventory
- Implemented tracking for borrowed books and user management features

Game Selling Websites (2 Projects) — HTML, CSS, JavaScript, jQuery

- Designed and developed two responsive websites for selling games, focused on UI, product display, and navigation

SKILLS

Programming Languages: Java, JavaScript, Python, PHP

Web Technologies: HTML, CSS, jQuery, Bootstrap, React

Frameworks & Tools: Laravel, FastAPI, MySQL, GitHub, Linux

Other Skills: Artificial Intelligence (NLP), Networking

CERTIFICATIONS

Digital Forensics & Incident Response and OT Security Workshop

Cloud for AI, Big Data & Machine Learning — Ministry of Communications and Information Technology (MCIT), Saudi Arabia
